TWELFTH ANNUAL REPORT

OF THE

Superintendent of Banks

OF THE

State of California

SUPERINTENDENTS OF BANKS OF CALIFORNIA.

ALDEN ANDERSON :

Appointed July 1, 1909; appointment terminated February 20, 1911.

W. R. WILLIAMS :

Appointed February 20, 1911; resigned November 30, 1918.

CHARLES F. STERN :

Appointed December 1, 1918; resigned June 20, 1921.

JONATHAN S. DODGE :

Appointed June 20, 1921; incumbent.

INTRODUCTORY LETTER.

October 31, 1921.

His Excellency, WILLIAM D. STEPHENS,
Governor of the State of California,
Sacramento, California.

DEAR SIR: I herewith submit the annual report of the Superintendent of Banks of the State of California, pursuant to section 140 of the Bank Act as enacted by the twenty-eighth session of the Legislature, and effective July 1, 1909. This is the twelfth annual report under the present law, and the first of the present Superintendent of Banks.

California is economically sound and its banks are safe. The state has passed successfully through the crisis of deflation and its banks, having met the enormous credit strain of the period, are distributing new credits, upon which is being built new prosperity. Our wonderfully varied wealth of the field and farms and orchards, of the mines and products of our industries and manufactures, of our domestic and foreign trade, is upon a firmer and sounder foundation than since the beginning of the World War.

We are richer than when the war ended. We are free from the speculations of war finance. We are going forward clearly to a realization of our great opportunities. Our primary problems are not now those of financial and economic readjustment, but of normal, rapid development; of tremendous physical advantages. Our producing and distributing communities are entitled to the full confidence of our banks and our banks merit the complete reliance of those who demand a just and an adequate distribution of credit.

After the fever of war speculation and fictitious profits we are returning to the inevitable operation of the law of supply and demand. Our farmers are now liquidating voluntarily and not by compulsion as they did a year ago. They are not now seeking, as they did then, to hold for higher prices.

It has been a year of noteworthy achievements in financial, economic and banking readjustment. Production fell off and prices declined. There were vital changes in the distribution of labor from wartime activities to the pursuits of peace and in our banks there was a gradual retirement of long term speculative paper and the substitution therefor of paper based upon actual business transactions and the con-

sumption of our products. Complicating our situation and influencing our export trade, in which California is so deeply interested, was the indubitable evidence of a returning productive power in the European nations. With violent reduction in prices, heavy decrease in production, of widespread unemployment, of business reaction and a general period of reorganization, we suffered all of the distress of the transition from war to peace finance and economics.

THE MOST REMARKABLE YEAR IN OUR ECONOMIC HISTORY

California, however, in the year under consideration, produced a volume of varied products greater than the year before. The critical test of financial banking and economic health is the volume of commodities available for consumption and the volume in the present year was above the average of many years.

As we must establish a distinction between productive changes and trade changes, among the latter being the movement of goods from the producer to the consumer, we must take into consideration that in the current year there were serious disturbances; a congestion in transportation and arrested movement of crops to the market. There was an endeavor on the part of some of our producers to hold commodities for higher prices. It was a period of general readjustment in business, in prices, in manufacturing activities and a reduction in buying power, together with a credit liquidation and a demoralization in exchange rates. All of these influenced the state and as the year closed we exhibited a material increase in our banking assets; a more normal activity in our varied pursuits and a realization that we were again upon a firm economic foundation.

The period, the history of which I record, begins a new business career for California; a career with lessened costs and larger production; a decline in the cost of living; a return to normal consumption and employment, and a reestablishment of trade and industry upon a new plane.

We have reached this enviable position after the most eventful and remarkable year in our economic history. It has been a year of strange vicissitudes. It began with an absolute demand for contraction and liquidation in all our business, financial, industrial, economic activities. Our living costs, wages, profits, labor efficiency, transportation, all our expenditures, were abnormal. There was a general slowing up of business that could not in any fashion be attributable to seasonal changes. There was the beginning of a reduction in our foreign trade that later was to find very serious expression.

Heavy cancellations between the jobbers and the retailers, as well as between the wholesalers and the manufacturers, disturbed our

banks and forced upon them the absorption of grave losses. There was cautious buying for the future because of very definite expectations of lower prices, but labor and manufacturing costs were still high, and there was in them very little of any suggestion of reduction. Stocks were at a very low ebb, but there were no replacements. The consuming public refused to buy only the bare necessities, but as our crop reports and predictions came, our outlook became clearer. This was modified by a threat of labor shortage on our farms that excited distress and the foreign exchange situation left doubt as to the prices for our products. It was seen that the foreign demand for our fruits and grains might be smaller, but at the same time the domestic problems of readjustment were beginning to be clearly seen and a solution was in prospect. The public's resistance to high prices was teaching everyone a lesson. We were reaching forward to a new basis upon which buyers and sellers could deal with each other in confidence and base their operations upon a new standard of value.

It has been a year of very marked stabilization in all our activities. Our banks have passed through a fire that has taught them the value of sound policies. They have a better vision of our financial needs. There is a more efficient management and service, both to their depositors and their borrowers.

Our readjustment, however, has been orderly. While we have gone to a lower price level, the process has not been drastic. While we are deflating rapidly, we at the same time are gaining an estimate of the unsound elements that crept into our financial banking and economic condition. It is extremely fortunate for the state that practically all of the elements that enter into our progress and prosperity realize that there must be not an irregular deflation, but a normal one, of commodities, securities and labor before we can recover fully from the war. Our retail merchants are understanding that the economic reaction is upon them as well as upon others, and that they must adjust their prices to meet new conditions. Deflation must not only be in production, but in distribution as well; in capital as well as in labor. The process is an inevitable one.

With this new understanding of new responsibilities our confidence rests in the immense crops of our state; in the restoration of adequate transportation. For the first time in ten years the railroads are on a sound financial and operating basis. Our banks have withstood the greatest credit strain in their history, and they are sound.

The tremendous surplus of prosperity which we acquired during the war period is stored and ready for our use as we progress along new lines of relationship. The markets of the world demand the products that we have to sell. Our state is neither over-built nor over-extended

in any of its basic activities. We are as sound financially, industrially and economically as any state in the nation. We are recovering from inflation, extravagance and unsound economics.

WE HAVE REACHED THE FINAL STAGE IN READJUSTMENT.

We have passed splendidly through a year of contrasts; of labor shortage, then unemployment; of a scarcity of commodities, then an oversupply that could not be sold; of railroads congested, and then asking for tonnage; of corporate and private extravagance and then of economy; of difficulties of adjustment of our foreign credit and cancellations, and then recovery from stagnation; and now we have reached the final stage in readjustment, preparatory to the substantial and sustained new business activity that will be the reward of our endeavor.

We have seen our foreign trade diminished. We have suffered a tremendous deflation in the prices of our raw material. Our ships have been tied up or idle. We have suffered in the transformation from a non-competitive basis to a competitive basis with the other nations of the world, but we know that for several years Europe needs and must have our foodstuffs and industrial crops, and in them rests the assurance of our prosperity. As we face the new fiscal year, the general credit situation is sound and under control. Losses that were due to deflation and falling prices, while they have been great, they are widely diffused, a fact almost unique in this state as compared with others. We have the intelligent cooperation of our banks, a reliance upon each other, and through the Federal Reserve System, a wonderful reserve source of strength. Credit is being given freely to solvent business enterprises which have been permitted to pledge their slow assets to meet their quick liabilities. While stagnation is still in a measurable degree with us, and unemployment still a problem, we are increasing our production and our consumption. While certain elements of prices and costs must be leveled, the equilibrium between the two will be established. While there is resistance in retail business and in finished manufactures as against raw material, there is an increasing distribution of goods from the producer to the consumer.

At the end of the year the money strain was over because of the tremendous inflow of gold into the United States. The drastic liquidation of commodities had, for technical purposes, been accomplished and there was a slowing down of business requiring a smaller volume of bank accommodations. Some of our banks found themselves with frozen loans which had been acquired during the period of war inflation; these had taken the form of enormous inflated loans, but they are being written down in the portfolios of these institutions to repre-

sent more closely the new and normal values now ruling. Other banks that were conservatively managed are showing a material liquidation of assets, accompanied by a lowering of deposits representing a decreased volume of business and less activity in credit.

Our business now is concerned primarily in minimizing inventory losses. The jobbers are fearful of another slump in prices and manufacturers need more credit to hold goods for the jobbers. Every important industry in the state is being surveyed, but with us trade and industry are on the up grade. Employment is measurably improved; there is a larger increase in shipment of citrus fruits than last year; there is an increased activity among the millers; canners are curtailing their pack, obedient to the condition expressed by the distributors; retail merchandise stocks are lower than they have been in years. It is highly significant that at the closing of the fiscal year, and since then, the influences tending to force down the cost of living are stronger than those that are governing wholesale prices. For the first time in the history of the state the public, by discrimination and reduced buying power, is actually fixing the retail price of goods.

We want cheaper money and more loans, but cheaper money can come only after liquidation and the increase of funds through this liquidation. Cheap money as a substitute for capital is dangerous. Those who want it most want it to delay, and not advance, liquidation and readjustment. Such money is simply banked money for speculation on future prices and has no place now in our economics.

Our banks have credit information they never possessed before and they are using it. The situation is distinctly strong, even though there be weak spots in it. The banks are helping splendidly in what is necessarily progressive liquidation. Behind them is the Federal Reserve System, establishing an equilibrium in our financial structure. This system is helping our banks and our business in the distribution of credit.

WE STAND AT THE BEGINNING OF A NEW ECONOMIC LIFE.

The Federal Reserve Bank of San Francisco has proved itself to be a shock absorber for the banks of the state. The year now under consideration is the first to see the normal workings of the Federal Reserve System. We have now in complete visualization the first decisive test of the efficiency of this system. Before the war the Federal Reserve Banks were not called upon to finance crop moving by supplying either credit or currency because of the tremendous release of credit by new and reduced requirements and the great influx of gold.

During the war the dominant position of the federal government in agricultural staples made a resort to ordinary or customary methods

of crop financing unnecessary because prices were rising. There was a governmental stabilization of prices and generally the establishment of artificial credit conditions. Now the Federal Reserve System is functioning so as to shift funds quickly from financial centers to crop moving sections, to create additional credit where it is needed, and without delay to supply necessary currency. The strain that was formerly on city banks is now on the Federal Reserve Bank in California. In this state we see this admirable plan working out; as the proceeds of the crops of one district or section are realized, they are made immediately available for the needs of another.

The Federal Reserve Bank of San Francisco in the last year has lessened the evils of inflation as these evils found their antipodal expression in deflation. This bank, by making credit more difficult to obtain, by maintaining high rediscount rates, prevented a new inflation after the lull that followed the first post-war downward movement which we all know was the severest in the financial history of the state.

The Federal Reserve Bank of San Francisco is now lowering these rediscount rates. It is making credit easier, but not by any means easy enough to continue the high level of prices. Stabilization can not be established at our present price level, and only when the conviction is absolute and general that prices are finally stabilized on a new and reasonable trading basis will credit be easy. The demand for credit this fall will be less than it was a year ago. I believe that the severest under-statement of the facts will establish the Federal Reserve Bank of San Francisco as one of the outstanding beneficial institutions in the financial and economic life of the state.

At the session of the Legislature this year the Bank Act of California was amended so as to permit our commercial banks and commercial departments of departmental banks to enter the field of acceptance credit upon a parity with national banks. It is wise, therefore, for them to understand thoroughly the meaning of these credit instruments, and the only legitimate part they can play in credit extension. Many of these acceptances represent simply frozen loans, the carrying of goods for speculative purposes.

We find in the national system that, both in foreign and domestic trade, banks are carrying an immense stock of goods on the strength of a short time acceptance credit, but which now means simply a long term obligation in grain, cotton, sugar, wool, raisins and other products. An immense and unnecessary burden has been placed upon our banks.

Bankers, unfortunately in many cases, have offered acceptances too freely to represent credit which would not have been granted in the form of loans. These credits are technically only notes collaterated by

warehouse receipts and endorsed by banks. This is not sound financing or good banking. The practice of receiving these acceptances is most dangerous. When acceptance credits are granted they should be liquidated at maturity by the payment of the obligation they represent. In this legitimate financing we have the most complete support of the Federal Reserve Bank of San Francisco. We have, therefore, many reasons for congratulation. The banking structure of the state is sound; it is devoted to public service; the state is not suffering from over-production, and we have an admirable community of interests between national and state banks, and behind them both, the correcting influence of the Federal Reserve Bank. This bank and its wonderful machinery averted a panic by governing the conditions which accompanied the rapid commodity price fall. It protected economic reserves and credits, mobilized our commercial activities and indubitably averted financial disaster.

We must not forget, however, that as we stand at the beginning of a new economic life and prosperity, we are still in the readjustment period. We are waiting for the completion of the liquidation of credit and a readjustment of costs. There must be an ample supply of credit and a definitely established price level before we reach the wonderful reward of our varied activity.

OUR RETURN TO SOUNDER BUSINESS FUNDAMENTALS.

As the year under consideration advanced, governmental finance and its problems were disappearing in our affairs and we found our major interest in an effort to restore normal conditions in business and banking affairs. We have realized an expectation of commercial and financial revival; a clearing up of commitments based on wartime price levels, a more permanent relation between supply and demand, and the shifting of industry from a war basis to one of peace. Our banks have been striving seriously and earnestly to liquidate their frozen credits, a most important consideration to them and to the productive energies of the state. Our banks must be relieved of their wartime loans in order that they may be able to enter the new field upon new conditions. I am glad to record that with the recession in wholesale prices there began an orderly movement of our crops, the creation of markets on a new foundation, and the absorption by our banks of losses necessarily sustained.

During the year supply and prices became gradually coordinated to demand. The liquidity of credit improved, but not in such sufficiency as to leave us either satisfied or complacent. Wages and labor became realigned to new conditions and business began to absorb the losses due to a required deflation. Our year is to be judged, not by the volume of business transacted, but by our return to sounder business funda-

mentals and our conservative response to better conditions affecting our agricultural, industrial and manufacturing life. We have gradually and surely been changing from a period of unsettled relative values to a period of real values; from temporary distorted conditions to intrinsic facts in our economic life. The story of the year is that we have been willing to receive a fair recompense for the economic service we render. The artificial expansion that was due to the war is disappearing and normal expansion, due to economic demand, is making its appearance. The first process has been the liquidation of commodities; slowly, to be sure, and not yet thoroughly accomplished. We must now complete the liquidation of credits.

There is unquestioned evidence, and the people of the state may place absolute reliance in it, that the commercial and industrial condition of the state is vastly improved, and our banks must remember that in the new order of things the bank that maintains too high a reserve, that refuses to loan to legitimate, necessary, enterprise, is as dangerous as the bank that indulges overextension; that loans too freely to speculative projects.

Our banks, fortunately, are realizing that loans to our own producers, manufacturers and merchants to carry unsold stocks bought at the higher prices of two years ago, must be eliminated, as they are the instrumentalities freezing credit. Our banks must know, also, that the purchase of foreign bonds is gambling; that when that purchase is made, it is a bet that the issuing government will return to a gold basis. We are concerned now dominantly with our own affairs, and not with those of European nations. We have the immense obligations of our own state in the development of its remarkable natural advantages.

Our farmers need help; they are seeking to adjust their expenses and to take advantage of lowering prices and to recover from the forces of reaction that have affected them so acutely.

It is the purpose and the mission of our state banks to give courage to the energies of our productive people. The Federal Reserve System is very properly demanding liquidation in banks. The purpose of this system is to mobilize gold and to expand and to contract credit as occasion may demand. As long as banks owe the Federal Reserve System, then rates of interest will be high. A lower rediscount rate will simply revive inflation and high prices. A higher reserve does not mean lower rates. That is the philosophy of the Federal Reserve System. Lower rates of interest necessarily will stimulate business, but business must pay off its old debts before it receives new stimulation. The relations between our banks and our producers must be stable and foreseeable; that is the normality toward which we must strive.

LIQUIDATION AND DEFLATION OF LOANS AND CREDITS

While our economic situation is fundamentally sound, depression is being felt in many directions. There is a disturbance both in our foreign and domestic market, but one outstanding fact corrects any thought of pessimism in connection with this situation, for we know, our banks, our producers and our distributors, that the era of easy profits has ended. While the precipitous price decline is now slowing up and buyers are beginning to regard the present price levels as worth trading on, nevertheless business recovery is slow. The general feeling is improved, and the dangerous stimulants to business are being taken away. The expansion of the currency, the over-extension of credit facilities, the indiscriminate lowering of rediscount rates, will not face us again. Gradually there is being accomplished a proper reestablishment of the relation between the Federal Reserve discount rates and the open market rate for money. With these inevitable signs of returning health, with a deflation of loans and credits, with a reduction in price of raw material, with a lowering of operating expenses, with a moderate reduction in building costs and a correction of the fear of capital because of governmental competition, with an improvement in the trade balances of foreign nations and sufficient increase of bank reserves to prognosticate a decline in the price of capital, nevertheless the Federal Reserve System is still committed to a policy of contraction until again we are moving forward without disturbance.

In this process of liquidation only those banks will lose who loaned to tenant farmers that have only now the crops at a greatly reduced price on which to realize. Payment of borrowers necessarily will be slow and our seasonal financing must proceed, but the outcome of all of this is not speculative. The banks will be paid their loans and the economic career of the state will not be interrupted. The procession back to the land has started again; our crops are immense this year. We find the net sales in our retail trade increasing within the state, particularly in the department stores. The workingmen are using their savings; the salaried men are taking advantage of reductions in price. There is a notable discrimination on the part of the public in favor of a better quality of goods and as we see the immense productivity of the state we must look to and be intimately concerned in foreign trade. Much of our rice, our manufactured products, our agricultural and fruit products and the result of our industrial labor, are now in warehouses and not in the hands of the ultimate consumer. We must develop a foreign market for our surplus production and our outlook now is greater than ever it was before to justify a plan of industries that will turn our raw materials into manufactures for foreign export.

The year showed a marked decline in our export trade and a lack of established machinery to finance that trade. Our problem has been

acute. We were unable to dispose of our goods because of high prices and no machinery to finance them. One of the immense foreign trade banks closed; another had to receive assistance. Our foreign trade, in association with that of the Atlantic seaports, had to be financed on a cash basis. The tremendous inflow of gold to the United States proved that this is so. Sales abroad became increasingly difficult; accumulations could not be disposed of; business conditions were essentially unfavorable in South America; foreign exchange problems are still dominant difficulties. New refunding schemes appear to offer but failure, and financing upon an investment basis obviously is not a remedy. It will require intimate study to evolve some scheme that will finance our varied products into the hands of foreign consumers. It is axiomatic that we must find the means of extending liberal credit to European and other foreign buyers without further inflating our own credit structure.

The duty of facilitating foreign trade on a long term basis is not an obligation of the banks of this state, either savings or commercial. It is the province, exclusively, of the investment market; of importers and exporters. The Edge Act corporations in their investment features suggest many and apparently insurmountable difficulties for our banks because of the grave doubts of the solvency of the borrowers who have availed themselves of the privileges extended by these corporations. Our national banks are not investing in the stocks of these corporations as they are fearful of the hazards involved, and if this feature of investment is not inviting to commercial banks it is manifest that it is impossible for savings banks.

WE SUPPLY MANY OF THE NECESSARY NEEDS OF THE WORLD.

As a measure designed simply to meet abnormal conditions the War Finance Corporation is again functioning to relieve the needs of agricultural communities with particular reference to livestock necessities. I recognize distinctly that foreign merchants and manufacturers are unable, or are unwilling, to purchase for the year immediately following harvest, as is customary in normal times, and the failure of merchants and manufacturers to carry normal stocks makes it necessary to market our staples over a longer period. The War Finance Corporation is designed in its present activities to accomplish the purpose these requirements involve, and our savings banks must not be subjected to a new and very dangerous kind of dubious long term paper that arises out of abnormal, and not normal, conditions. The expanded credit and currency structure of Europe demands that the people of European nations shall do something for themselves. The very securities that will underlie the debentures of foreign trade corporations are not now

available for savings banks in this state, and the Legislature in amending the Bank Act of California has done so unquestionably with the thought that governments that need economic help must do something to help themselves. The great objective of the commercial banks of California during this year of strange transitions was to stop the inflation of credit without permitting the deflation of credit to interfere with our progress in new endeavor. No device of foreign bond investment, either direct or indirect, should be allowed to disturb or destroy that objective.

California begins the new era of economics and of finance with an ability to supply many of the necessary needs of the world. We have new standards of living; we are producing splendidly; our resources are expanding, and we have before us immense new opportunities for our industry and our trade. Our bankers recognize that dead assets should be written off; they are liabilities. The people of California know now as they never knew before, that when production is at its height and exchange is equable, prices are of no concern.

We recognize clearly what we must do. We know that we need a readjustment of our agricultural situation because of a lack of a present market and declining foreign markets. We need a realignment of agricultural, commercial and business interests in the state; we must develop our industries still more and find markets for our surplus production. Our difficulty is not overproduction, but under-consumption. We are very much more than an agricultural state, and in that relationship which is to be established between us and other communities, we should have free zones which do not injure our industries but promote our trade.

California banks possessing more than \$700,000,000 in assets are members of the Federal Reserve Bank of San Francisco, and this membership has taught, perhaps more than anything else, that gold is no longer an evil in finance. The mobilization of gold in the Federal Reserve Bank of San Francisco prevents its vicious use in the hands of hundreds of banks creating an inflation by unwise credit. Gold now is used to manufacture credit, and when credit is not needed, gold is not used. The rediscount privilege of the Federal Reserve Bank of San Francisco is the lever that turns on or shuts off the credit of the banks of California. It is an insurance that before now we neither understood nor enjoyed.

California was among the last of the states of the American Union to feel the depressing influences of deflation and it is among the first to sense the new and normal correlation of production and distribution. During the year all of our large cities enjoyed a good retail trade. This was notable in the southern part of the state. A feeling of confidence

came to us after the close of the fiscal year under discussion. Increased production and industrial energy, widely exercised, resulted in an increase in employment. A remarkable development in seasonal activities, in road constructions, in reclamation work, in power and irrigation products, in improvements in all of our chief industries, demonstrated to us, and particularly to our banks, that we were again on the high road of sane development. Our great cooperative marketing associations, controlling the citrus, apricots, prune and raisin industries, added in a notable degree to the restoration of our equilibrium. These associations are the model of the world; they are being copied in every other civilized trading community; they perform a service that is inestimable in the state, and their encouragement should be the purpose of every individual in California who has the welfare of the state as his concern.

Since the fiscal year has closed we note the volume of goods moving at retail is greater than it was during the fiscal period. Increased prices have begun to show in many of our basic products. In clearings, while they are less in amount of value, they are far greater in volume than they were during the fiscal year. While there is a deflation in price, there is an increase in output, a sign of health and progress. While our retail business is twenty-five per cent less in price, it is greater in volume than in our year of vicissitudes. The wholesale trade is larger in volume, although about forty per cent less in price. Building activity, particularly and very noticeably in the southern part of the state, is increasing. Building prices are decreasing. Failures during the year were more numerous than in the preceding year, but they were less in liabilities. The poorer and more loosely organized firms were being forced out.

We are the fourth state in the United States for farm products. Our basic agricultural products of field and farm and orchard make us the most diversified agricultural area in continental United States. The composite condition of all crops in California now is only five and two-tenths per cent below a ten-year average, which is distinctly a far better showing than that of the year before. In considering this percentage average we must, however, take into consideration that in ten years the crop value of California increased from \$146,526,151 to \$587,600,951 in the fiscal year I have under discussion. This tremendous increase is due to our use of water and water power; to irrigation, to intensified farming, to increasing the improved cultivation of our soil. Ten years ago there were 88,000 farms in California; now there are 117,000. The big concentrated areas of California are being broken up into small farms. The small farmer is multiplying. Out of 100,000,000 acres in California, 29,364,000 are being farmed, and these farms have increased from a valuation of \$1,614,000,000 in 1910 to \$3,431,000,000 in the fiscal year of 1920-1921.

ENORMOUS PRODUCTS OF OUR FIELDS AND FARMS.

The facts of our remarkable condition of wealth, in the products of our fields, farms, orchards, forests and mines, are of intimate concern to every producing community and every bank distributing credit in the state. With the thought that our present situation is of value as expressed in the details available for our major or key products, I have attempted to make, briefly, an economic survey of the state.

In making this analysis I have segregated the products of our state into those of the fields and farms, into deciduous fruits, into citrus fruits, into livestock, dairy products, wool, fish, lumber and mining. The facts and figures and percentages are for the fiscal year 1920-1921.

California produced this year 30,200,000 bushels, or 700,000 tons of barley. The producers must face pre-war prices and an immense carry-over from the preceding year, but they have the advantage of knowing that already we have terminal receipts 530 per cent greater than the year before and exports of this commodity 566 per cent greater than the preceding fiscal year. The stocks at San Francisco, Port Costa and Stockton are 36 per cent less than they were a year ago. While the price for the fiscal year 1920 was \$1.52 and for 1921 57¢, nevertheless our producers are selling their commodity, reaping their rewards with lower costs, particularly in exports. The close of the fiscal year under consideration justified, both in price and in movement, the enterprise of the producers of this immense commodity.

In cotton we produced very much less than the year before, and the average production was 73 per cent as against 92 per cent of normal for a ten-year average. While the production was less, the price is higher, and while we produced on only 131,000 acres as against 278,000 acres of the year before, the industry is certainly upon a more firmly established basis. Through the port of Los Angeles an additional 34,000 bales, grown in lower California, contribute to the market condition. Our net production of cotton for the year is 41,000 bales.

In grain sorghum we produced 123,000 tons on 145,000 acres, disclosing 91 per cent of a normal output as compared with 92 per cent of the year before and a normal average of 87 per cent on a ten-year basis. Prices fluctuate so greatly that an estimate of values cannot at this time be given.

The annual yield of oats was less in the fiscal year under consideration than in the year before. The product this year was 4,740,000 bushels, representing 86 per cent of a normal product. The production of hay was 4,200,000 tons, produced on 2,100,000 acres. This product, of course, includes alfalfa, grains of various descriptions, clover, timothy and other cattle feeds. It does not include the production of 192,500 tons of wild hay.

Our production of hops was 78 per cent of normal as compared with 93 per cent of normal of the preceding year and 94 per cent on a ten-year average. Our output was 16,000,000 pounds as against 21,000,000 pounds of last year. We utilized 12,000 acres of land and we produced one-seventh of the entire product of the United States. There is an immense shortage in the United States and all of the other producing hop countries of the world. We have a heavy carryover from 1919-1920 and the price will range from 28¢ to 35¢ as against 55¢ to 65¢ in the preceding year.

In Indian corn Sacramento and San Joaquin valleys were the primary producers. The output is 2,362,000 bushels as against 3,150,000 in the year before; only 72,000 acres were utilized as against 92,000 in the year before. The annual productivity was 85 per cent as against a ten-year normal of 88 per cent.

In the production of lima beans we have dropped to 75 per cent of normal and produced on 112,000 acres as against 150,000 acres of the year before, giving a total production of 950,000 centals. Even in this production there will be a favorable price. In Ventura there was a marked decline of productivity because conditions were essentially unfavorable at planting time and Los Angeles fortunately contributed to help the general situation. The production in beans other than lima beans will aggregate approximately 2,500,000 centals, a production on 170,000 acres as against 135,000 acres of the year before. There is a record crop in blackeyes, only half a crop of small whites in Santa Maria and Lompoc, a reduced acreage in Sacramento and San Joaquin valleys and spotted even there, but the situation may be attributed to the unfortunate experiences of bean growers during and immediately subsequent to the war.

The production of potatoes is 83 per cent of normal in contrast to 85 per cent on a ten-year average. We have produced more than thirteen and a half million of bushels on 98,000 acres of land and we find that the United States crop, outside of this, is 25 per cent less than it was the year before. We have, therefore, an optimistic outlook for this product. The output of sweet potatoes was 89 per cent of normal as contrasted to 91 per cent of a ten-year average. In the neighborhood of 1,196,000 bushels were produced and 8000 acres of land were under cultivation for this product.

The production of rice developed certain very marked distressing incidents.

Flood conditions in Colusa County accomplished a loss of 800,000 bags, but notwithstanding that fact the year's production will be 83 per cent of normal as compared with 88 per cent of the year before and a nine-year average of 92 per cent. If the acreage is harvested and the present condition maintained until then, there will be a pro-

duction of 3,500,000 bags, or 175,000 tons, Cold weather materially interfered with the ripening of the crops; a falling market disturbed all price conditions, but it would seem that the value that will be realized from the product will be in the neighborhood of \$11,700,000.

Our production of sugar beets this year is greater than that of last year. It will aggregate 958,000 tons that will bring in the neighborhood of \$5.50 to \$6 a ton. The product is 85 per cent of normal as against a ten-year average of 89 per cent. There are now under cultivation in this state in sugar beets, 292,000 acres.

I regard the outlook for our wheat production as most optimistic. More than 8,500,000 bushels were produced during the year on 505,000 acres. This was something less than one-half million bushels for the preceding year, but there was a greater product to the acre this year and the crop is being moved to the seaboard cities in volume 126½ per cent greater than last year. Our present export is 442 per cent greater than it was a year ago. The millers show increased domestic and foreign demand over the previous year. The stocks of flour now on hand are less than they were at a corresponding period last year and the carryover of wheat is less than it was at a corresponding period a year ago. The price of wheat to the grower in 1919-1920 was \$2.38 a bushel while in 1920-1921 it is \$1.29, but producing costs are reduced, normality is almost restored and the new condition is one upon which the producer may trade with profit.

TREMENDOUS WEALTH IN DECIDUOUS AND CITRUS FRUITS.

All deciduous fruits and stoned fruits matured satisfactorily. Shipments were practically of equal volume as those of the year before, although the price was less. We are assured a splendid market for our apples, as the crop estimate for this fruit in the United States is approximately one-half of what it was for the preceding year, assuring our growers of substantial returns. We produced 5,992,000 bushels, an aggregate less than the year before, but under conditions now existing more valuable than the year before. Our output was 65 per cent of normal as compared with 72 per cent for the preceding year and 78 per cent of a ten-year average.

The raisin season of the year opened with 50,000 tons carryover from the year before when prices were abnormally large and their repetition could not under any circumstances be expected. A new low quotation of nine cents a pound was established to remove the immense carryover and the result was a substantial reduction in these stocks. Lower freight rates from \$1.66½ to \$1.25 a hundred pounds for packed fruit and \$1.45 a hundred pounds for sacked fruit, assisted materially in the movement of the crop. A very heavy eastern movement followed and the condition of the entire situation became brighter. The value

of the crop this year, based upon current quotations, will be in the neighborhood of \$56,000,000. The output will be 128,000 tons as against 180,000 tons for the year before. The normal product is approximately 200,000 tons.

The value of the year's product in peaches is \$26,220,000. The output is 320,000 tons. Heavy and serious winds in the Sacramento Valley injured the crops and the percentage was only 73 per cent of normal as against 86 per cent of the year before and the normal average for the past six years of 83 per cent. The product of figs was 83 per cent of normal as against 98 per cent of the preceding year.

The current year prices for prunes was practically one-half of what they were a year before. There were sharp deflations in this commodity and a necessary readjustment to the new condition. The heavy purchases by middle western Europe marketed a very heavy carryover from the 1919-1920 crop. The percentage of output was 73 per cent as compared with 74 per cent for the preceding year and of 80 per cent of a ten-year average. The product was 94,000 tons as against 95,000 tons for the year before. The industry is essentially upon a new and permanent basis.

The growers of apricots will realize \$9,775,000 for their year's product, which is 55 per cent of normal as against the same percentage of the year before, and as against 76 per cent on a ten-year average. The dried and canned product is 115,000 tons. The almond crop shows no difference from the year before, but prices are materially less.

The price that will be realized from pears is the lowest since 1913. The output is 60 per cent of normal as against 76 per cent for the preceding year, and 83 per cent on a ten-year average. There have been very large shipments out of the state and the comparatively small product of 75,000 tons will have its major consumption in foreign markets.

The production of table grapes is below normal. It will approximate 120,000 tons and will average in price \$75 a ton. The production is 67 per cent of normal as against 85 per cent of the preceding year.

Ventura, Los Angeles and Orange counties produce practically all of our walnuts. A blight cut down this year the average production to 21,000 tons, which was 72 per cent of normal as against 82 per cent on a ten-year average. The price will approximate \$8,600,000.

The production of plums was 66 per cent of normal as against 70 per cent for the preceding year. The product of olives was badly spotted as to condition, and was only 63 per cent of normal as against 70 per cent for the preceding year, and a ten-year average of 75 per cent.

In citrus fruits, California this year establishes a new high record of production. The crops of oranges and of lemons are the largest in

the history of the state. The Los Angeles territory produces 87 per cent of oranges, and 90 per cent of lemons, of the state. The output for oranges is 21,500,000 boxes, 2,800,000 boxes greater than the year before and that year was the greatest, up to that time, in the history of the state. It is estimated that 49,000 cars will represent the shipment of the citrus fruits for the year. The product is 86 per cent of normal, as against 82 per cent of last year, and a ten-year average of 78 per cent. Marketing costs are less than they were last year and, while prices are less, it is safe to conclude that the profit will be greater.

The product of lemons is 4,663,000 boxes, as against 3,750,000 boxes the year before, a gain of 917,000 boxes. The percentage of production was 86 as against 82 of the year before, and 83 on a ten-year average. There is an estimated shipment of 11,400 cars. There were serious difficulties in connection with the production of this fruit. The interjection of foreign competition demoralized the market. There was a rapid, sharp recovery and while there was a big carryover from the preceding year, the profits for the producers will be substantial. It is estimated that the total value of lemons and of oranges for the year will be in the neighborhood of \$80,000,000.

RICHES ON OUR RANGES, THE SEA, OUR FORESTS AND OUR MINES.

The livestock industry of the state progressed to its conclusion in the year under conditions entirely favorable. The average of production was 83 per cent of normal. Five hundred thousand cattle were slaughtered. During the height of the season it was reported that sheep men were reducing their flocks, but low prices for mutton lambs acted very substantially to check this tendency. The production of wool in the state, therefore, was not as great as that of the year before. Its percentage average was approximately 90 per cent of the clip of the preceding year, and something over 10,000,000 pounds is the estimated clip for the year. Seventy-five per cent of the preceding year's clip is still unsold, and this year's clip is of finer grade. Prices receded to those of 1915, but the product was a heavier fleece and better quality. There was a substantial reduction in labor costs and a significant advantage was observed in the fact that shipments from the inter-mountain countries to San Pedro increased greatly in volume because of an immense saving in shipment from the port of from seventy to eighty cents a hundred pounds by water. Conditions in pasture were very much better for the current fiscal year than for the preceding year, showing 98 per cent of normal as against 73 per cent for the year before, and 78 per cent on a six-year average.

The dairying industry in the state is enormous, but during the year there was a large falling off in production because of a strong consum-

ing demand and a marked reduction in storage stocks. Notwithstanding its own enormous production, California absorbs large shipments of butter from outside markets. Los Angeles and San Francisco are two of the four principal markets for this commodity on the Pacific Coast. There was a sharp decline in prices made to milk producers as compared with the preceding year. The state enjoyed a steady Eastern demand for dairy supplies and unexampled prosperity marked this element of our industry.

The fish industry of the state showed a marked decrease as compared with the preceding year. The catch of tuna of all varieties was about 8,000 tons as against 33,800 tons for the preceding year. The industry is confined primarily to sardines, tuna and salmon. In the sardine catch the decrease was very material, as there will be this year only 1,000,000 cases. In salmon the catch will be 31,000 cases. Prices in all of these varieties have decreased.

The lumber industry of California languished during the year, but at the conclusion of the fiscal period, and now, there is every evidence of the return of the industry to normal levels of consumption. Price levels are lower, practically by one-half, than they were a year ago, and while the prices for California redwood and white and sugar pine are declining or stationary, there is a very reasonable hope for future substantial business. The present market for lumber of every kind produced in this state is showing activity and stability. The demand is increasing, both in local and Eastern consuming centers; while the average wholesale price for all varieties and kinds of soft wood is now a little more than 50 per cent below the prices of one year ago, there is good reason to believe that these prices will advance. This decline is noticeably larger than the general decline of wholesale prices and a reaction may be expected. Our production now is greater than it was a year ago. Shipments are larger. While shipments to Europe, to the west coast of South America, to Australia, and China have decreased, there is a pronounced increase in the shipment to Japan. The anticipated resumption of buying by railroads and an early and continuous marketing by our farmers has stimulated rural consumption of lumber and a reduced railroad rate to the market east of the Mississippi has given every suggestion for a return to normality in production and sale. There is increased building in our cities, pronounceably so in Los Angeles, which in building activity is now the third city in the United States. As wages and materials decline, there will be an improved domestic and import condition. There are limited supplies of stocks in the hands of distributors and we are entirely safe in predicting the reopening and larger output of our mills.

One of the most highly significant and profitable industries in California is that of mining. The metals of the state for the year under consideration were worth \$242,099,667. They represented fifty different kinds of minerals, and every county in the state contributed something to the aggregate. There was an increase in value during the year of \$46,269,665 over the preceding year. In petroleum, silver and lead, we had an increased output. In gold, copper and quicksilver there was a decrease. Our largest and most valuable mineral product was petroleum, but in all of the three significant groups, the structural, the metals and the industrial, there was material and very substantial results.

The significant feature of the industry during the year was the closing down of many of the largest gold and copper mines in the state. Unfavorable conditions existed for the production of gold, particularly in the mother lodes of California, where many of the mines that ranked as the largest in the state were compelled to cease operations. Without dredging, gold mining would now be in a very serious condition in this state. The dredgers, fortunately, have been operating at full capacity, while the total reporting deep gold mines of the state represented not more than 70 per cent of normal output.

For many months in the year the production of petroleum was greater than consumption, and stored stocks were increased. Approximately seventy-five new wells were completed during the year and there are now more than six hundred active drilling wells in the state, the largest number since 1911. Activity in development is greater than it has been in ten preceding years. The industry is of vital importance to California and one of its aspects I shall discuss later in this report in connection with the absolute demand for the exploitation, development and use of hydro-electric power in California.

WE ARE FIFTH STATE IN THE UNION IN BANKING POWER.

In our trade, retail, wholesale and general, we are placing our house in order. In the retail sphere sales are greater than a year ago, but the selling price is approximately 25 per cent less. In the wholesale trade the net value of sales decreased approximately 40 per cent, but retailers are again stocking their shelves. Collections are good, although in some features the range is from excellent to poor. Unemployment is still serious and complicated by an influx of workers from outside sources. There is a distinct improvement in the acceptance market; money rates are lower; the customers of city banks are paying off their loans rapidly enough to permit these banks to care for the seasonal demands of the state, and provide for the payment by big banks of their indebtedness to the Reserve Bank of San Francisco.

As the new fiscal year progresses, there is a partial but material liquidation of farmers' loans. There is an increase in freight movements and stabilization of raw material prices; an increasing and developing foreign trade; an improvement in retail distribution; a distinct indication of better buying by farmers; general sales are becoming larger; the railroad situation is improving; our manufacturing industry is expanding; we are facing better business, independent of the customary seasonal fall inspiration. The demand by foreign peoples for our products has shifted from manufactures to raw materials, as these foreigners can manufacture cheaper than we. It is significant that foreign countries bought 35 per cent more of our raw materials from March 1 to July 1, 1921, than for the same period in 1913. When the forces of distribution are fully reorganized, our tremendous production will bring the state and its people their full reward.

As we progress toward normality in production, in diversity of enterprise and in the development of the remarkable natural resources of the state, we have at our command a banking power of \$2,425,000,000, the representative combined assets of our state and national banks, making us the fifth state in the Union in this regard. On the state side, we have banking assets of \$1,511,000,000, as the largest aggregate in the history of the banks of California, and on the national side we have a total of \$914,597,000. This is a material increase of \$17,595,000 since the close of the fiscal year under discussion. This increase is represented by \$15,320,000 in the state banks and \$2,275,000 in the national banks in California.

Since the close of the fiscal year under consideration, the banks in the state system have been reduced by one, leaving the aggregate 422, but the branch offices have been increased by fourteen, making the total 207, each of them a significant, highly organized and important banking institution in the territory in which it exists. The number of national banks remain as they were at the close of the fiscal year under consideration, 313. There are in the state, therefore, 735 banks and 207 branch offices, giving us an aggregate of 942 banking institutions, each of which performs the highly significant service to the community that is demanded by commercial and thrift needs.

During the year, which was one of astonishing danger and difficulty, our state banks have performed their double duty with conspicuous success. Our commercial banks and commercial departments of departmental banks have grown amazingly in their progress to their highest objective, the financing of the trade of the state and in supplying the credit necessary to production and distribution. Our savings banks have contributed immense sums to our endeavor to develop the state in

its natural resources; to inspire new and legitimate enterprises, industries of agriculture, manufacture and commerce.

The advancement of these institutions on their commercial side is one of the signal features of the banking year. Three controlling facts, representing three distinct outstanding movements in our financial growth, have ruled the expansion of our commercial banks, and the commercial departments of our departmentalized banks. An increased membership in the Federal Reserve Bank of San Francisco, a manifest tendency of national banks within the state to become state banks, either by conversion or sale, and the establishment of our banking laws upon a parity with those of the national banks, have brought our commercial state banks out on the highway, the end of which is dominance in the commercial banking of the state.

FEDERAL MEMBERSHIP AND GAINS FROM NATIONAL BANKS.

At the beginning of the fiscal year under consideration the membership of California state banks in the Federal Reserve Bank of San Francisco represented a capital of \$28,126,100, a surplus of \$14,411,100; assets of \$578,429,366 and a deposit liability of \$494,730,992. At the end of the fiscal year this representation in membership had increased to involve a capital of \$36,761,900, a surplus of \$16,998,600, assets of \$659,392,535, and a deposit liability of \$552,638,607. During the year there was an increase in membership reflected by \$8,635,800 in capital, \$2,587,500 in surplus, \$80,963,169 in assets, and \$57,907,615 in deposits.

Since the close of the fiscal year on June 30, 1921, the tendency to membership is even more marked than it was during the fiscal year. Since June 30, 1921, to September 6, 1921, there has been an increase in membership in the Federal Reserve Bank of San Francisco represented by \$2,625,000 in capital, \$624,228 in surplus, \$47,774,781 in assets, and \$42,451,540 in deposits. In the two months that have followed the close of the fiscal year under consideration, considerably more than half the aggregate of the entire preceding fiscal year has been added to the assets of the member banks operating from the state side, while in the same period of two months the deposits taken in to membership were four-fifths as great as those that were involved in the transition during the entire preceding fiscal year. This, essentially, is the contribution of the banks of California to the Federal Reserve System. It is not a contribution of commercial assets only; the outweighing resources of these member banks are those of savings banks, but these through their capacity to hold a literal secondary reserve, rediscountable with the Federal Reserve Bank of San Francisco, are lending an immense measure of strength to the great American banking system of mobilized credit reserves.

The second vital influence affecting the rapid growth and importance of the commercial banks and the commercial departments of departmentalized banks in the state system during the year and since, was the tendency of national banks resident in the state to sell their assets and transfer their deposit liabilities to state institutions and also to enter the state system through the process of merger. These tendencies have been increasingly marked and are indubitably more in characteristic evidence in this state than in any other of the Union. Our state banks are offering many advantages that the national banks do not possess. The laws of California, providing for departmentalized banking, for segregated assets and liabilities for each of the departments, are very attractive to the banking community. So pronounced has been this movement on the part of the national banks that even the National Congress has indicated its desire to departmentalize the national institutions and perhaps grant to them some of the branch office privileges now enjoyed by state banks of California.

In the state system we have, for all practical purposes, a parity of authority and functioning with the national banks. The extension of some of our major state institutions has resulted in the sale of national banks and in another aspect, perhaps even of more importance, we have the merger of dominating state banks with smaller national banks in the same economic territory. This merging of assets and of banking power in a territory that has the same economic objectives is unquestionably a splendid development of banking capacity. It has been displayed more particularly in the southern part of the state and there is now pending a transaction that will give to that part of California one of the largest banks functioning in a single economic territory in the United States. It is extremely desirable that a large institution, covering the same field now occupied by many smaller ones, should command that field with a centralized, organized government. In the distribution of credit with a knowledge of the needs of every part of the territory involved, far better results may be accomplished than through the agency of many smaller institutions consuming much of their profits in overhead expense.

During the year ending June 30, 1921, nine national banks sold their assets and transferred their deposit liabilities to state institutions. The national banks thus ending their affairs and preserving a continuity of banking functions in the state system possessed a capital of \$4,225,000, a surplus of \$2,020,000, assets of \$59,848,000, and deposits of \$46,000,000. During the same period six state banks went into the national system. These state banks, finding their expression in the Federal system, possessed a capital of \$330,000, a surplus of \$85,500, assets aggregating \$4,337,000, and deposits of \$3,704,000. The net contribution of

national banks to the state system during the fiscal year, therefore, represented an aggregate of capital of \$3,895,000, of surplus \$1,934,500, of assets \$55,511,000 and deposits of \$42,296,000.

Since the close of the fiscal year of June 30, 1921, the movement of national banks in the state into the state system has continued. As a net result, we have in the state system since June 30, 1921, to September 6, 1921, an increased capital of \$450,000, an increased surplus of \$192,000, an increase of assets of \$5,713,000, and an added deposit liability of \$4,780,000, giving for the entire period from June 30, 1920, to September 6, 1921, an increase of \$4,345,000 in capital, an increase of \$2,126,500 in surplus, an increase in assets of \$61,224,000, and an increase of \$47,076,000 in deposits.

The third fact that gave direction and impulse to the expanding influence of our commercial banks was the amendment of that part of the Bank Act that has application to our commercial banks. This amendment broadened the scope of our commercial banks, gave them opportunity to avail themselves more completely of the privileges of the Federal Reserve Bank of San Francisco, and placed them upon an equality with the national banks in the state. There is yet, of course, a disadvantage under which our state banks suffer because of the restrictions placed upon rediscountable paper held in the pouches of state banks. There is indication, however, that the Federal Reserve Act will be amended in that particular so as to give the institutions operating under the laws of this state the same privilege now enjoyed by national banks in this regard.

AMAZING GROWTH OF OUR COMMERCIAL STATE BANKS.

In analyzing the condition of our state commercial banks and the commercial departments of departmentalized banks, in those relationships that mean solvency, liquidity and ability to distribute properly the credit of the communities in which they exist, we find that these institutions have made major increases in capital; that they have reduced their aggregate of bills payable and rediscounts with banks other than the Federal Reserve Bank; that, although they have increased their bills payable with the Federal Reserve Bank of San Francisco, this is because of the policy of a single state institution to borrow rather than discount; that they have, in general, reduced rediscounts with the Federal Reserve Bank; they have increased their net balances with other banks and the Federal Reserve Bank; that there is an immense increase in their aggregate of assets, in loans, and in stock of the Federal Reserve Bank. It is interesting to observe that the stock held by state banks in the Federal Reserve Bank of San Francisco is very largely supplied by the savings banks or savings departments of

departmental banks, rather than by the commercial banks and the commercial departments of departmentalized banks. There has been in our commercial banks and commercial departments of departmental banks a large increase in bond investments, but this represents one of the inevitable features of the inflation that is not yet altogether out of our banking assets, and is expressed in United States government securities.

An analysis of the salient features of our commercial banks and the commercial departments of departmentalized banks is highly interesting. On June 30, 1921, the combined assets of these institutions were \$479,340,514.36, an increase over the previous year of an aggregate of \$31,494,913.27. On September 6, 1921, practically two months after the close of the fiscal year under consideration, the assets of our commercial banks and commercial departments reached an aggregate of \$501,759,847.46, an increase of \$22,419,333.10. This is a very illuminating illustration of the rapidity with which the assets of our commercial banks are increasing.

At the close of the fiscal year June 30, 1921, the aggregate of loans and discounts in our commercial banks and commercial departments was \$289,727,139.42, an increase of \$22,207,591.61. In the two succeeding months the aggregate of these loans and discounts has advanced to \$292,655,083.57, an increase of \$2,927,944.15. At the close of the fiscal year June 30, 1921, cash on hand in these institutions was \$18,871,279.46, a decrease of \$3,129,682.08. In the two months following, this aggregate had advanced to \$19,003,725.70, an increase of \$132,446.24. The aggregate of sums due from banks had decreased during the fiscal year in the sum of \$5,322,573.43, reaching an aggregate of \$38,650,794.52. In the item due to banks, there was an increase of \$5,139,799.62. These two items represented the seasonal demands of the interior banks upon those of our leading cities and was a necessary consequence of the demand for crop financing. In the two months succeeding the fiscal year that closed on June 30, 1921, the item due from banks increased \$11,363,736.24, reaching an aggregate of \$50,014,530.76, while the item due to banks increased only in the sum of \$2,725,707.24, reaching an aggregate of \$26,574,471.54, showing that the seasonal demands of the interior banks had been successfully met and that they again were depositing in heavy sums with their city correspondents.

During the fiscal year our commercial banks and commercial departments of departmental banks had an aggregate of \$15,796,771.40 due them from the Federal Reserve Bank of San Francisco, an increase of \$4,169,638.31 for the fiscal period. During the two months succeeding the aggregate of due from Federal Reserve Bank of San Francisco was advanced to \$17,108,883.15, an increase of \$1,312,111.75, a splendid

showing for the period covered. During the fiscal year, individual deposits in these institutions reached an aggregate of \$329,783,562.15, an increase of \$12,614,290.32; in the two following months these deposits mounted to \$346,429,942.66, an increase of \$16,646,380.51, approximately \$4,000,000 increase in two months as against the preceding twelve months.

During this period our commercial banks, realizing the new and enlarged call upon their facilities and their service, increased their capital in the sum of \$7,679,925, making an aggregate of capital in these institutions of \$51,062,145. At the same time the surplus in the commercial banks and commercial departments of the state system was increased in the sum of \$3,786,649.59, giving an aggregate of \$18,050,028.43. In the two months succeeding this fiscal period, the capital of these banks and departments was increased in the sum of \$879,550.

One of the most characteristic features of the expansion of the commercial side of our state banking system is the increase in the depositors in our commercial banks and in the commercial departments of departmentalized banks. At the end of the fiscal year, on June 30, 1921, there were 673,284 depositors, an increase of 97,419 for the fiscal year. In the two months succeeding that fiscal year the depositors had increased in number to 709,218, an increase in this short period of 35,934 commercial depositors.

These facts and figures demonstrate the wonderful growth of the commercial side of the state banking system. We are going forward upon an established line of immense progress. We are seeking with enlarged capacity to meet the immense demand of production and distribution. The facts and figures, summarized and tabulated, of our commercial banks and commercial departments of departmental banks for the fiscal year that ended on June 30, 1920, as compared with the fiscal year that ended on June 30, 1921, are as follows:

Commercial Banks and Commercial Departments.

HIGH ECONOMIC AND SOCIAL VALUE OF SAVINGS BANKS.

While the state system on its commercial side is organized for the one characteristic purpose of financing our agriculture, industry, manufactures and trade, the savings banks are established for a very different, although an equally vital accomplishment. These banks are to develop the state in its natural resources; to give financial support and direction to the immense problem of irrigation; to assist in the subdivision of large real estate holdings; to help in plans of drainage and reclamation; to encourage those great public utilities that harness the natural water power of the state; to give reality to natural avenues for transportation, and, in brief, to contribute to the success of every agency that is vital to the welfare and the orderly advancement of California. We are still a state in the making, and our first and most direct support is to the expansion of our natural advantages.

The Bank Act of California in its savings bank sections has two outstanding points of view: the first, to encourage thrift; to establish absolute safety in investment, and to direct that investment into channels of economic and social welfare. It is my purpose to insist upon a scrupulous recognition of the restrictive features of the savings bank law of California, and, in my authority, to certify certain kinds of bond issues for these institutions, to make very sure that these issues are designed for an economic value and not for private convenience or profit.

The source of the economic development of California is the small savers of the state, the men and women whose individual margin between receipts and expenditures is small. It is these people, the thrifty wage earner, the farmer, the small shop keeper, the country merchant and the professional classes, who are the real owners of the savings banks of this state. These are the people who are supplying the great fund of money for the exploitation and development of our irrigation, hydroelectric and transportation systems. The vast fund accumulated in the savings banks of California through the contribution of individuals must be administered in wisdom. The savings bank is not organized to sustain the vicissitudes of commerce; it is created to develop the state, slowly, surely and safely. Those that expect financial assistance from savings banks must be able to show that the projects for which they ask for financial aid are to be financed scientifically and administered properly. These projects are valuable to the savings banks and to the people of the state only as they yield the greatest value to the public. In railroad finance, in public utility finance and in industrial finance, there must be, exclusively, an economic purpose. Every enterprise financed by our savings banks must serve a public end and not a private profit. Our savings banks are of the highest social significance as they are necessary to industrial progress and to repair

the ravages of war. Through these institutions we must solve our housing problems. Every bond issue that is certified must be for social gain and not personal advantage.

The certification of bond issues as eligible for savings bank investments is one of the serious duties, therefore, of this department. These bond issues must be such as to recommend them to the people of the state as of financial, economic value in the development of California. The great public utilities of transportation and of water power should command our sympathetic attention. Both project their importance far into the future for dependent upon both is the potential development of millions of nonproducing acres of land in this state.

HYDROELECTRIC DEVELOPMENT OF FIRST IMPORTANCE.

The development of our water power will solve two gigantic problems: those of transportation and of oil, both affecting most intimately our economic life and its future. We need, incontestably, a substitute for oil in our industries. The whole United States, at the present rate of the consumption of oil, has under ground only a natural current of oil for twenty years more. California has already used more than one-third of the oil underneath its surface. The approximate consumption of oil for the fiscal year under consideration was 100,000,000 barrels, which is 10,000,000 barrels more than the state produces. We need, therefore, a consistent, progressive, expanding development of our water power. At the beginning of 1920, there was in this state through the agency of hydroelectric conservation, one million horsepower. This was increased twenty-five per cent in the fiscal year 1920-1921, and it is expected that within another year this will be raised to one and one-half million horsepower. What this hydroelectric power means to the industrial and agricultural wealth of California is admitted, and it requires no discussion to suggest the association of this development of hydroelectric power to our prosperity in the future. California has now the third largest hydroelectric company on the American continent. The potential capacity of this state is 9,250,000 horsepower; we have much, therefore, to do, and our savings banks are to perform this service through the agency of this tremendous public utility, organized under the principles of scientific, modern, corporate finance, and administered as an economic and social possession.

In irrigation we have the same splendid outlook. We have done much to reclaim the arid lands of California, but we have much more to do before we have made productive the millions of acres that are waiting for this assistance. It is part of my duty to participate as a member of the commission organized under state law to certify irrigation projects as eligible for savings bank investments. These projects

demand sympathetic consideration. They involve so much that is of prime importance to the state.

Even some of our mistakes have demonstrated the value of irrigation. The economic history of the year I have under discussion shows that in some localities, productive localities, where stock was raised, dairying was profitable and where there was a normal rotation of crops, everything was abandoned to the lure of one product. A speculative rush on inflated values followed and collapse was inevitable. In the process of this development, however, large areas, involving thousands of acres, were placed under irrigation and drainage systems. Without the one crop industry, years would have elapsed before the development would have been a reality such as we now have. In this placing of large areas under irrigation and drainage we have visualized the immense intrinsic value of getting water on the land. A new vision has opened for more conservative treatment, for a diversification of agricultural activity, and irrigation will do what before was impossible.

In real estate bond issues we have another immense field for legitimate savings bank investments, but these issues must again be for social and not private purposes. They must be contrived to assist in subdivision into small farms. Such issues have no place in savings banks if they are simply for refunding purposes, or if they are to pay the debts of the owners of large acreages of land; such plans should be financed by private funds and not by savings bank funds.

In my certification of bond issues that are expected to find major residence in our savings banks, I am insisting upon the principle of amortization. The theory of a sinking fund is obsolete in our present day finance. All highly developed finance in foreign countries is upon the principle of amortization. It has been adopted by many of the states and municipalities in the United States. It has the sanction of the highest scientific authorities and it is mandatory in the Federal Farm Loan statutes. It is expected that a bond issue will be paid and not refunded at its maturity; provision, therefore, for that payment must be made throughout the life of the bond issue. When we ground ourselves firmly in the theory that a bonded indebtedness is simply a capitalization of earning power, then the existence of a bond issue can be justified; otherwise it cannot. The revenues of the property underlying the bond issue must be sufficient to pay that issue within the life of the issue. The fallacies of the sinking fund theory are widely known and I am very firmly committed to the system of serial payments in bond issues.

During the fiscal year that ended on June 30, 1921, the Superintendent of Banks certified as legal for investment by savings banks an aggregate of \$153,630,700 in bond issues. In addition to that, the commission that examines and certifies as legal for investment irrigation

bonds, certified to an aggregate issue of \$10,438,000 in these bonds, making a total of \$164,068,700 in bond issues certified as legal for our savings banks. Of the aggregate certified by the Superintendent of Banks, \$2,521,200 represented district bond issues for roads, reclamation, drainage, municipal improvements and streets. Of the total there were certified \$24,895,000 in real estate bonds, and \$126,214,500 represented the certified bond issues of the year for the public utilities of this state. Of these utilities the outweighing part was for the development of hydroelectric power.

Since June 30, 1921, I have certified to an aggregate of \$19,920,008 in bonds thus made eligible for savings bank investments; of these bonds \$1,316,008 were for various districts in the state, for roads, drainage, local improvements and county development. Of the total for the three months since June 30, 1921, \$3,725,000 was for real estate bonds and \$14,879,000 represented the total of public utility bonds, certified as legal. Of these utility bonds the major part was for the development of hydroelectric energy. I have also, as a member of the commission authorized to certify irrigation bonds for savings bank investments, participated in the certification of a total of \$3,780,000.

As our savings banks automatically have the right to invest in bonds of the United States, of certain of the states of the union, and of this state and its political subdivisions and as practically half of their investment in bonds is in such securities they have a wonderful opportunity to contribute to the wellbeing of this state by investing their available funds in bonds that are intended to be of economic value to California. It is interesting in this connection to note that the minister of finance of Canada placed an embargo a year ago upon all imported securities upon the ground that these securities very measurably and unwisely were the cause of the improper diversion of savings bank funds in Canada. That embargo was maintained until there was a readjustment of a very serious condition reflecting upon the prosperity and potential growth of the dominion. The action of this high official would seem to suggest very pertinently a lesson to the savings banks of California, even in the purchase of governmentals.

GIGANTIC AGGREGATE OF SAVINGS BANK ASSETS.

During the year under consideration, deflation from the inflated values and money expression of the war period began its irresistible certain course in the savings banks of the state. Notwithstanding the fact that the assets and deposits of the savings banks of California were greater than they ever were before in their history, they had begun to decline in actual value. The rate of tremendous increase had stopped; the decline had begun. Involved in the deflation was the diversion of savings bank deposits to home building and the purchase of Liberty

Bonds. The differences expressed in the rapid mounting of both assets and deposits are illustrated by a comparison of the figures as between the fiscal year 1919-1920 and 1920-1921.

In the fiscal year 1919-1920 there was an increase in savings bank assets of \$163,931,263. In the fiscal year 1920-1921 there was an increase of \$62,588,508, a difference of increase of \$101,342,755 in a single year. While the assets themselves had increased in an enormous figure, the tremendous rate of increase had stopped and the difference of over \$100,000,000 in one year represents the actual process of deflation.

In July, 1920, this movement was entirely apparent, and as the months passed it grew in strength until at the close of the year the immense sum of deflation was disclosed. The process was orderly and occasioned no distress. It was one of the inevitable consequences of post-war reaction expressed in terms of money. The peak of inflated savings bank values was reached in June, 1920, and the decline to normality has not yet been concluded.

This tendency is expressed with equal force in the deposits of the savings banks. The rate of increase in these deposits reached its peak in June, 1920, when the increase for the fiscal year that ended on June 30 of that year was \$155,587,371. In the fiscal year that ended on June 30, 1921, the increase was \$54,327,321, a runoff of \$101,260,050 during the year; while there was in deposits as well as in assets an immense increase, the rate of decline had commenced and was progressing without interruption. It is still in existence, but is showing evidence of slower progress. The rate of decrease for the two months following the close of the fiscal year under consideration is thirteen and a half millions dollars.

The facts that are disclosed as incidents in the functioning of the savings banks of California during the fiscal year 1920-1921 are of prime importance. During this year these savings institutions increased their loans in the sum of \$73,026,180.25, having at the close of the fiscal period an aggregate of \$575,394,379.94; added to this aggregate of loans \$19,232,617.04 representing the investment by savings banks in bankers' acceptances and notes, drafts or bills of exchange made eligible by the savings bank sections of the Bank Act. It is notable that during the year this investment ran off in the sum of \$23,529,525.47. This runoff was the elimination of commercial paper. Our savings bankers, alive to the mutations and dangers of commercial banking, not only ceased in a large measure to purchase commercial paper, but disposed of such as they had at maturity. Fortunately there were very few and minor defaults in these investments. The banks now have in their pouches bankers' acceptances which necessarily are to be looked upon as the highest credit instruments in our system of finance. Since the close

of the fiscal year that ended on June 30, 1921, and to include September 6, 1921, there has been an increase in loans of \$3,623,187.84 and a further decline in commercial paper of \$1,166,755.75, leaving our present aggregate in the savings banks in loans of \$579,017,567.78 and in bankers' acceptances and commercial paper of \$18,065,861.29.

During the fiscal year the savings banks increased their holdings in bonds in the sum of \$15,601,546.35, making the aggregate \$290,413,900.24. Since the close of the fiscal year, these banks have increased their bond holdings in the sum of \$597,270.19, making the aggregate on September 6, 1921, \$291,011,170.43.

As I have heretofore indicated, the burden of membership of state banks in California in the Federal Reserve Bank of San Francisco is upon the savings banks and savings departments of departmental banks, and not upon the commercial banks, although the Federal Reserve system is exclusively a commercial banking system. At the close of the fiscal year June 30, 1921, the savings banks of California had invested in the stock of the Federal Reserve Bank of San Francisco \$1,590,850, and since then, up to and including September 6, 1921, there is an additional investment of \$35,750. The increase for the fiscal year in the ownership of this stock was \$556,350, and since the closing year, up to and including September 6, 1921, the increase is \$35,750.

One of the substantial static items in the resources of the savings banks of the state is their investment in banking premises. At the close of the fiscal year it represented an aggregate value of \$26,730,778.83, an increase of \$6,932,089.87. Since the close of the fiscal year this has been increased by \$653,088.80.

The investment of these banks in other real estate, most of which has been taken for defaulted debts, was at the close of the year \$4,542,054.33, a decrease of only \$263,522.72. This is far too great an aggregate, but conditions have prevented its liquidation and we may expect during the present fiscal year a more substantial progress. Since the close of the fiscal year, to and including September 6, 1921, there has been an increase in this item of \$126,828.05.

The savings banks of California find their liquidity and substantially all of their liquid reserves in their balances with the Federal Reserve Bank of San Francisco, with their correspondents, in their investments in bonds, practically half of which are governmentals of the United States, and in cash. The balance due to savings banks from other banks in the state on June 30, 1921, was \$48,058,721.87, and from the Federal Reserve Bank of San Francisco \$13,954,274.38. Since the close of the fiscal year and up to and including September 6, 1921, the credit balances of these banks with their correspondent banks has fallen off \$8,662,225.21, representing the major part of the decrease in

deposits, but the balance with the Federal Reserve Bank of San Francisco has increased \$895,260.81, a very admirable showing.

In the item cash on hand, which is so essential to the liquidity of the savings banks, there was in the actual possession of the banks themselves the sum of \$18,363,799.74 at the close of the fiscal year. This represented a decrease of \$3,893,053.74 and was a significant part in the withdrawal or decline of deposits. Since the close of the fiscal year the cash on hand has run off an additional sum of \$2,011,660.52, leaving cash on hand in the sum of \$16,352,129.22. This, added to the reserve with the Federal Reserve Bank of San Francisco, and the credit balances with correspondent banks, represents a highly liquid condition.

Savings banks in California can borrow money only to meet the immediate demands of their depositors. It is a matter of the highest congratulation, therefore, that at the end of the fiscal year on June 30, 1921, all of the savings banks in California owed only \$33,000. Since the close of the year they have been required to borrow an additional \$10,000, making an aggregate of borrowed money of only \$43,000, an entirely negligible amount.

At the close of the fiscal year ending June 30, 1921, the savings banks of California were capitalized in the sum of \$36,609,100, an increase of \$3,141,266.04 for the fiscal period, an immense increase in the sum contributed by the stockholders of these institutions as security for their functioning as savings banks. At the close of the same fiscal period the savings banks had in surplus \$23,666,044.12, an increase of \$1,188,270.96. These figures combined represent the splendid background of security for the depositors of the savings banks of California. The assets of these institutions are so rigidly restricted that it is impossible for them to be even doubtful, much less worthless. Added to their value is the aggregate of the capital and surplus supplied by the owners or stockholders of the banks. At the close of the fiscal period these banks had an aggregate of \$5,043,893.16 in undivided profits, an increase of \$33,344.12 for the fiscal year. This is not truly representative of the profit of the institutions as there is deducted from the aggregate the payments in dividends and interest. This is shown by the condition of the undivided profit accounts on September 6, 1921, when this account had increased to \$8,743,165.56, an increase of \$3,699,272.40 in something more than two months.

The deposits in the savings banks increased during the fiscal period \$54,327,321.97, showing a credit balance to the depositors of the bank of \$912,449,472.47.

I have explained the meaning of this increase and its relation to the process of deflation which is now in progress. The resulting figure on September 6, 1921, was \$898,871,966.13, a decrease of thirteen and

one-half million dollars, which is a sum less than the normal decrease for the first two months of the fiscal year under consideration.

In the enormous number of deposits in the savings banks of California there is included something more than one million dollars in school savings deposits. The collection of school savings deposits, now made more interesting and more important by that mandatory provision of the Political Code which requires instruction in thrift, should be one of the vital activities of our savings banks. I can conceive of no better method of inculcating practical lessons of good citizenship, of thrift, of business intelligence, of development of individual character, than this system of collecting from school children of California their savings. We are the first in the aggregate of these savings of the states of the union, yet we are only beginning this splendid course that ultimately should reach great proportions.

It is to be regretted that only a negligible number of our savings banks are functioning in the field of school savings. Every savings bank in California should indulge this privilege of its existence. A wonderful field for the betterment of the banks themselves, as well as for the advantage of the many thousands of school children in the state, is open to these banks. It is my earnest hope that they will see the wisdom of encouraging school savings. There is from this encouragement the opportunity for the finest reaction possible in our social life. We shall have from it better, more responsible citizens, men and women with a finer knowledge of their responsibilities to the government and of the part they play in it.

During the fiscal year under consideration the depositors of the savings banks of California increased in the number of 163,695, giving an aggregate of savings depositors in the state of 1,593,090. In the period succeeding the fiscal year only 2744 savings accounts have been closed, leaving now the aggregate of 1,590,346. This is a splendid representation for a state with the population of California. It shows the thrifty habits of our people and is a guaranty of substantiality in our government.

Compared with the report of June 30, 1920, the condition of the savings banks and of the savings departments of departmental banks of the state system, at the close of business on June 30, 1921, expresses the following facts:

Savings Banks and Savings Departments.

EXPANSION OF STATE AND NATIONAL TRUST COMPANIES.

Trust companies and trust departments of departmental banks continued during the fiscal year 1920-1921 the notable success that they have established in their career. There are only ten institutions in the state that confine their functioning exclusively to a trust company business and only twenty-six more that are departments in departmental state banks. These institutions, however, have an aggregate of more than ten and a half millions in dollars in assets, and they have under their direction and in their care more than \$100,000,000 in court

trusts and in those private trusts that through the initiative of the trustors have been placed in the category of court trusts.

The progress of the trust company business in this state is slow, but it enjoys the utmost confidence of the people of California. A corporate condition has vindicated itself as against any other, and the scrupulous exactitude with which the institutions under the supervision of this department have conducted their affairs has given to them a substantial character that is not excelled by the institutions of any other state.

In California the trust companies, or trust departments of departmental banks, are devoted exclusively to fiduciary relationships. They are not banks of deposit and they can indulge no banking privileges. They are, therefore, immune from the hazards of commercial banking in a departmental institution and for that very reason, where there is an absolute assurance of the safety of the trust and its conscientious administration, our trust companies are going forward very surely. Of necessity they are of slow growth, but in their private trust department they handle tremendous aggregates of property with perfect fidelity to the trusts involved.

During the fiscal year under consideration there was a reduction in the court trusts and in the private trusts that are within the category of court trusts, as there was a decrease of approximately ten and a half millions. This simply represented the completion of the trust and its elimination from the institution in which it was resident. This decrease simply indicates the conclusion of a very serious obligation assumed by these fiduciary institutions.

By authority of national legislation, national banks resident in this state, and having capacity to make the deposit of securities required by state law for trust companies, are privileged to establish trust departments. At the beginning of the fiscal year 1920-1921 nine national banks in the state had established such trust departments, one additional was added during the fiscal year and one more has assumed these responsibilities since June 30, 1921. All of these national banks must conduct their trust departments exactly in the same fashion that trust companies organized under the laws of this state must do. In order that our state law may be observed, these national banks have set aside \$1,559,848.73 in assets. This is not an allocation of the capital in each bank, but a segregation of assets designated by the bank act for the protection of the court and private trust business of these institutions. There is in this attractive feature of the state law a very material but only partial acceptance of the theory and wisdom of departmental banking. It represents the first step in a process which already has been under serious consideration by the national legislature and may develop into a full acceptance of the departmental

banking of this state by which each department is separate and distinct from the other and superior and immune from the hazards of any other department.

Compared with the report of June 30, 1920, the condition of the trust companies and of the trust departments of departmental banks of the state system at the close of business on June 30, 1921, expresses the following facts:

Trust Companies and Trust Departments.

	June 30, 1920	June 30, 1921	Increase	Decrease

NOT A SINGLE BANK IN THE STATE SYSTEM HAS FAILED.

In the highly important element that reflects soundness, liquidity and liquidation, the expression of our banking assets, as their commercial and savings departments are combined, is an assurance that we are passing through the most critical period in our banking history with safety.

Not a single bank in the state system in California failed during the fiscal year 1920-1921, nor since. One bank, without authority, closed its doors, but an investigation and a rehabilitation with the introduction of new capital and a new management restored this institution and it is again on a solvent basis. On June 30, 1921, the combined assets of the state banks of California were \$1,496,036,458.94, an increase in resources over the previous fiscal year of \$93,676,143.90. In the two months succeeding the close of the fiscal year up to and including September 6, 1921, the aggregate of combined assets has increased \$15,320,426.86, giving the state a combined banking power of \$1,511,356,885.80 in the state system.

During the fiscal year under consideration the loans and discounts in the state system increased in the sum of \$94,823,975.60, giving to the system an aggregate of \$867,037,856.01. Since the close of the fiscal year, and including September 6, 1921, there has been added to this aggregate in loans and discounts the sum of \$6,531,219.83. These

loans and discounts, established in normal relationship to the deposit liability of the institutions of the state, represent the returning condition of gradual, progressive and healthy deflation that is so much desired by every productive interest in California.

During the year the combined individual deposits in our state banks increased in the sum of \$66,941,612.29, giving an aggregate for the state system of \$1,242,233,034.62. Since the close of the fiscal year and up to and including September 6, 1921, these individual deposits have increased in the sum of \$3,068,874.09, making the splendid total of \$1,245,301,908.71 on deposit in the banks of the state. As indicative of the purpose of our savings banking institutions to avail themselves of the mobilized reserves of the Federal Reserve System, there was an increase of \$4,994,595.71 in deposits due from the Federal Reserve Bank of San Francisco to the state banks, making an aggregate at the end of the fiscal year of \$29,751,045.78. Since the close of the fiscal year this immense sum has been increased by \$2,207,372.56, so that on September 6, 1921, our state banks had to their credit in the Federal Reserve Bank of San Francisco \$31,958,418.34.

The very vital need of establishing a reasonable relationship between capital and surplus on the one hand and deposit liability, loans and investments on the other, has been insisted upon by the state government and the Bank Act insists upon a rigid observance of statutory requirements. Frequent but futile efforts have been made by the national congress to bring about a similar condition in national banks. There is reason to believe, however, that the wisdom of the California law would justify its emulation by the national system and there will be placed upon the stockholders of banking institutions that serious responsibility which the law of this state requires. On June 30, 1921, the banks of California were capitalized in the sum of \$95,409,145, an increase of \$11,221,191.04 during the fiscal year. In the two months that have succeeded June 30, 1921, and inclusive of September 6, 1921, this capital has again been increased in the sum of \$1,655,050, making the aggregate capital of our state banks \$97,064,195. Added to this imposing sum is a surplus that on June 30, 1921, aggregated \$43,355,665.36, an increase of \$4,673,135.14 for the year. Since the close of the fiscal period and including to September 6, 1921, \$50,439.34 has been added to this surplus, making the present aggregate \$43,406,104.70.

In the state banking system of California there were on June 30, 1921, 2,266,374 individual depositors, an increase of 261,114 for the fiscal year. Since the close of this period, and including September 6, 1921, there have been added to this number 33,190 depositors, making a total of depositors in the banks of this state of 2,299,564 men, women and children.

At the close of business on June 30, 1921, there were 423 state banks with 193 branch offices distributed as to functioning as follows: Commercial banks, 74; savings banks, 105; commercial and savings banks, 208; commercial, savings and trust company banks, 26; trust companies, 10. Since the close of the fiscal year 1921 important changes have occurred in the number and character of our state institutions. There are now 422 state banks with 207 branch offices, each of which is in character and in size practically an independent institution.

These institutions are now divided as follows: Commercial banks, 72; savings banks, 104; commercial and savings banks, 209; commercial, savings and trust company banks, 27; trust companies, 10.

During the fiscal year under consideration 21 new banks were added to the system. Since the close of the fiscal period 5 more have begun operation. During the fiscal year 35 new branch offices were opened and since the close of the fiscal year, between June 30, 1921, and to the present time, 16 new branch offices have been opened, illustrating very well the rapid development of this form of banking in the state system. During the fiscal period 1920-1921, 9 national banks were purchased, and since the close of that period 7 more of the national institutions have entered the state system through the process of an agreement of sale and purchase by which their assets have been transferred to the state banks and their deposit liabilities assumed by these institutions. During the year new departments were added as follows: Commercial departments, 2; savings departments, 4; trust departments, 2. Since the close of the fiscal year an additional commercial department, 2 new savings departments and 1 trust department have been added to the system.

During the year 6 state banks were nationalized. Since the close of the fiscal period there has been no change with this reference. In the fiscal period under discussion 4 branch offices of state banks were voluntarily closed, and since then another has ceased to operate. These changes represent simply a further concentration in the centralized energy of our state banks. Eleven banks sold their assets and transferred their deposit liabilities to other state banks, the process being representative of the development of the branch office banking theory. Since the close of the year 2 more banks were sold in obedience to the same process.

As an incident in the development of the system, 64 banks in the state system increased their capital during the year, and since then 3 more have followed in this admirable path. One bank decreased its capital during the year, and that is the only incident of this character. Two banks became extinct by consolidation during the fiscal year and 4 since the close of that period, the proceeding representing a further development in the movement to concentrate banking power

to handle identical economic problems. Twelve state banks joined the Federal Reserve Bank of San Francisco during the fiscal year 1920-1921 and 2 withdrew because of consolidation with institutions that were already member banks. Since the close of the year two more of our state institutions have joined the Federal Reserve Bank of this district.

We have adopted the policy, having found it contributory to the best interests of the state banks of California to demand call reports from them coincidentally with the calls required by the comptroller of the currency. This coincident demand upon the banks gives to this department and to the United States officials a far more comprehensive understanding of banking and financial conditions in the state than would be if separate dates were chosen for the call. During the year, therefore, this department issued calls as of September 8, 1920; November 15, 1920; December 29, 1920; February 21, 1921; April 28, 1921, and June 30, 1921.

As compared with the report of June 30, 1920, the combined condition of the state banks at the close of business on June 30, 1921, expresses the following facts:

State Combined.

	June 30, 1920	June 30, 1921	Increase	Decrease

CHANGES IN THE LAW ASSIST OUR PROGRESS.

I have at this time no suggestion of amendment to the Bank Act that may be desirable. We are now testing the practical value of those amendments that were adopted at the session of the Legislature this year. Among those that have appealed with particular force to me is that which amends section 80 of the Bank Act, the controlling statute which governs the loans that may be made by commercial banks of the state system and which I have already discussed.

That amendment which permits a small bank to act as a broker or agent in securing for other and larger banks loans on realty within a radius of 100 miles of the broker bank has already justified its existence. Our large banks have capacity to assist small communities, and through the medium of a small banking institution immediately concerned with the prosperity of its own territory and intimately acquainted with values in that territory have fine opportunities to render that

public service for which they are organized. The great values of the state, even in the smallest communities, can find expression in the immense resources of metropolitan banks. Advantage of this statute has already been taken and I have adopted rules and regulations under which the brokerage may function.

The amendment to section 13 of the Bank Act in removing the conduct of so-called immigrant banking that frequently assumes the aspect of a dealing in exchange has resulted in distinct good. The great transportation companies, telegraph companies, tourist companies of long standing, trans-atlantic and trans-pacific steamship companies, have accepted the amendment with alacrity, and this very precarious form of banking is now in their keeping; licensed, directed and supervised. Irresponsible persons had been reaping an extortionate profit from ill-informed persons in this business and the change in our law has contributed very well toward the destruction of the evil.

The adoption of section 31*b*, under authority of which banking institutions in the state system may merge their affairs, has become a medium for two major consolidations or mergers now in progress. The merging of important institutions operating and distributing the credit of the same economic territory is unquestionably to the advantage of the state, and shortly we shall have, as a result of the adoption of this change in the Bank Act, two institutions that will rival in importance the largest and the best in the United States.

The introduction of section 56*b* into the Bank Act, within the terms of which a national bank in this state may convert into a state institution, has already borne results. One national institution is in process of conversion, as an incident in a more general tendency of national banks in California to avail themselves of the privileges of the departmental banking theory.

The enactment of the amendment to section 23 and the allied sections of the Bank Act has been justified. In those cities of the state, particularly in Los Angeles, where the territory is very large and divided into many small concentrated communities, having at their command a prosperous contributory territory, it is unnecessary either economically or financially to demand of banks that should be organized there that capitalization which is required in a metropolitan area. The amendment which permits smaller capitalization, therefore, is desirable and will work excellently in practice.

THE STORY OF WRECKED BANKS IS CLOSED.

I am pleased to report that, for the first time in the history of the State Banking Department of California, the liquidation of dead banks is no longer of concern. All of the assets of state banking institutions that failed in the last ten years have been distributed and their obliga-

tions, as far as they could be paid, have been satisfied. It is a matter of congratulation that I have now remaining only the payment of a dividend to the creditors of one institution and the completion of the formal procedure that will accomplish the elimination of these institutions from our contemporary records. When the fiscal year 1920-1921 began there were four banks in process of liquidation. The first of these, Kimmon Ginko (The Golden Gate Bank), was closed on March 29, 1909, and for twelve years, until September 30, 1921, it dragged the slow course of its liquidating affairs through this department. The disposition of a small area of real estate of practically negligible value, delayed the concluding incidents of liquidation, but on February 10, 1921, a final dividend of 3 per cent, making a total dividend of 28 per cent, was paid, and the sum of \$18,012.36 was deposited with the state treasurer.

On October 18, 1909, the Japanese-American Bank of San Francisco was closed by order of the department. Ever since then this bank has been in liquidation, but I am happy to report that not later than a month from now the final dividend of approximately 13 per cent will be paid, making an aggregate of 46 per cent of creditors' claims, and the bank will be simply a matter of unsavory history.

On May 12, 1911, the Kern Valley Bank was closed; a final dividend of 25.6 per cent was paid on May 16, 1921, making a total dividend of 77.6 per cent to the creditors of the institution. The formalities of liquidation will be taken next month.

On September 30, 1918, Union Savings Bank of Santa Rosa was closed because of disaster overtaking its affiliated national bank. The savings bank was solvent. Its relationship to the national bank made its continued life impossible. A dividend to depositors and creditors of 100 per cent was paid, however, and there remained a dividend of \$28.60 a share to the unfortunate stockholders of the institution. Liquidation was closed on September 20, 1921, and \$1005.42 was deposited with the state treasurer. It is gratifying, therefore, to report to you that the story of these wrecked institutions is closed.

Appended hereto and made a part of this report are the following:

1. Summary of condition of every state bank.
2. Summary of condition of trust departments of national banks.
3. List of new banks and branch offices.
4. Name and compensation of each person employed and the whole amount of receipts and disbursements of this department during the fiscal year.
5. Names of banks placed in the hands of the Superintendent of Banks in process of liquidation and the amount of dividends paid thereon.
6. Miscellaneous changes in banks.

7. Report of deposits in state and national banks unclaimed for more than ten years.
8. Report of deposits in state and national banks unclaimed for more than a period of twenty years.
9. Banks authorized to make collections of savings from school children.
10. Tabulated statements of condition of banks.

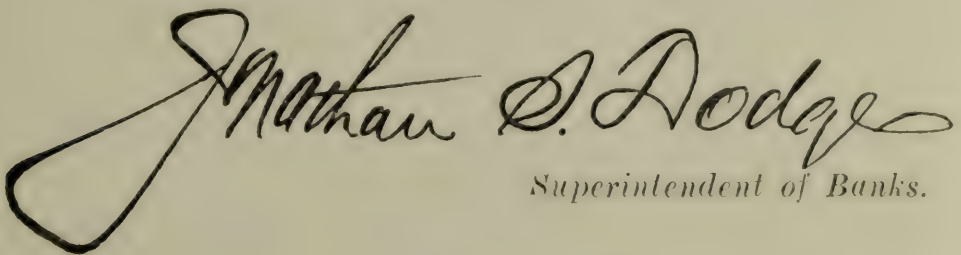

IN CONCLUSION.

In summary and conclusion, my report to you is intended to show a year of strange caprice in industry, finance and banking, a year of danger, difficulty and deflation, a period of hazard and of hardship in the world of production and distribution.

I have sought to outline the tremendous effects of reaction from the fool's paradise of inflated war profits and the splendid response California has made to an appeal for new and necessary standards in finance, banking, trade and commerce.

We live in a commonwealth of many diversified forms of wealth. We possess potentialities for prodigious new wealth. Our wonderful natural resources demand exploitation, and as we stand at the door of new opportunities we must suffer no deviation from our purpose to command for the people of the state the prosperity their energies and environment merit in the highest measure.

Yours very truly,

Nathan S. Dodge
Superintendent of Banks.
